## Spring Core – Load Country from Spring Configuration XML

An airlines website is going to support booking on four countries. There will be a drop down on the home page of this website to select the respective country. It is also important to store the two-character ISO code of each country.

Code	Name
US	United States
DE	Germany
IN	India
JP	Japan

Above data has to be stored in spring configuration file. Write a program to read this configuration file and display the details.

### Output:

```

SpringLearnApplication [Java Application] C:\Users\pivnet\p2\pool\plugins\org.eclipse.justi.openjdk.hotspot.jre.full.win32.x86_64_21.0.6.v20250130-0529\jre\bin\javaw.exe (11-Jul-2025, 8:44:32 pm elapsed: 0:01:00) [pid: 11660]

## 2.spring-rest-handson

### Hello World RESTful Web Service

Write a REST service in the spring learn application created earlier, that returns the text "Hello World!!" using Spring Web Framework. Refer details below:

**Method:** GET

**URL:** /hello

**Controller:** com.cognizant.spring-learn.controller.HelloController

**Method Signature:** public String sayHello()

**Method Implementation:** return hard coded string "Hello World!!"

**Sample Request:** http://localhost:8083/hello

**Sample Response:** Hello World!!

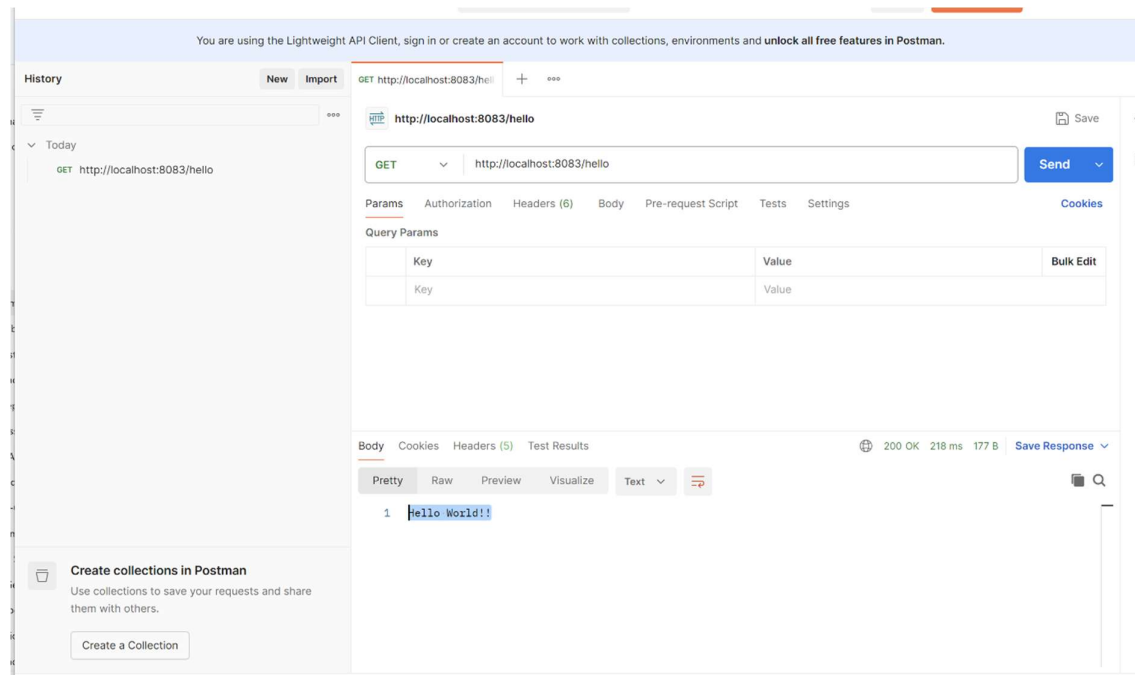

#### Output1:

## Output2:

## REST - Get country based on country code

Write a REST service that returns a specific country based on country code. The country code should be case insensitive.

Controller: `com.cognizant.spring-learn.controller.CountryController`

Method Annotation: `@GetMapping("/countries/{code}")`

Method Name: `getCountry(String code)`

Method Implementation: `Invoke countryService.getCountry(code)`

Service Method: `com.cognizant.spring-learn.service.CountryService.getCountry(String code)`

Service Method Implementation:

- Get the country code using `@PathVariable`
- Get country list from `country.xml`
- Iterate through the country list
- Make a case insensitive matching of country code and return the country.
- Lambda expression can also be used instead of iterating the country list

Sample Request: `http://localhost:8083/country/in`

Sample Response:

```
{
  "code": "IN",
  "name": "India"
}
```

## 5. JWT-handson

### Create authentication service that returns JWT

As part of first step of JWT process, the user credentials needs to be sent to authentication service request that generates and returns the JWT.

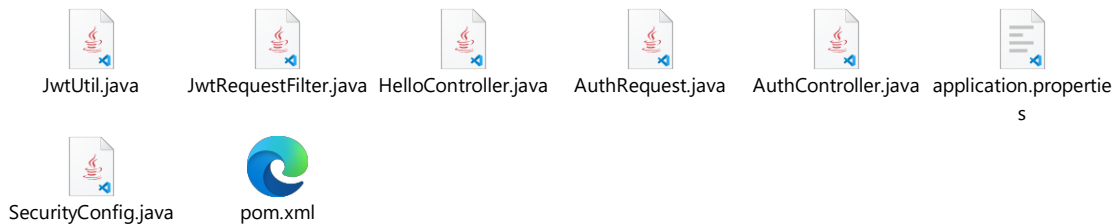

Ideally when the below curl command is executed that calls the new authentication service, the token should be responded. Kindly note that the credentials are passed using -u option.

### Request

```
curl -s -u user:pwd http://localhost:8090/authenticate
```

### Response

```
{"token": "eyJhbGciOiJIUzI1NiJ9.eyJzdWIiOiI1c2V5liwiaWF0IjoxNTcwMzc5NDc0LCJleHAiOiE1NzAzODAzNzR9.t3LRvICV-hwKfoqZYlaVQqEUiBloWcWn0ft3tgv0dL0"}
```

### Output:
